

Pinnacle Cedar Shingle Panels are hand-crafted using selected, fine grain Western Red Cedar shingles. Panel installation is simple and fast while providing the appearance of expertly installed, premium quality, traditional cedar shingles.

Pinnacle Panels are:

- 1) 6 to 8 times faster to install than traditional individually applied shingles, giving project cost savings of between 20% to 25%.
- 2) engineered using 3/8" exterior-grade plywood as a substrate, stainless steel staples, and state-of-the-art adhesive, making them more stable and durable than traditional shingles.
- 3) environmentally sustainable and socially responsible, they are made from clear sawmill trim ends that would otherwise become wood chips.
- 4) out-performing none wood products, in terms of durability and cost savings.
- 5) low maintenance.
- 6) kiln-dried and ready for staining, requiring 40% less stain than traditional shingles.
